Documentation of

setInterval and setTimeout

Introduction

In this project, we are going to use two important JavaScript feature to control the behavior of message based on the time.

- setInterval ()

We can repeat a task in the given amount of time. For example showing a message in each 10 minutes.

- setTimeout ()

By using this method, we can let the program to do certain at specific amount of time.

Tasks Distribution

We created three tasks for this project:

1. setInterval()

We create two files and demonstrate how it is work; estimated time is set to 2 hours and are done at estimated time.

2. setTimeout()

We create two files and demonstrate how it is work; estimated time is set to 2 hours and are done at estimated time.

3. Readme.md

In this section, we looked at this link https://gist.github.com/PurpleBooth/109311bb0361f32d87a2#deployment to provide a meaningful explanation in readme file. Estimated time was 2 hours. In addition, in fact it took 5 hours of time.

For more information, please refer to remde.me file.
